About Us :

PRG Spectra Diamond Tools Pvt. Ltd. is an emerging manufacturer of high-performance diamond tools, committed to delivering precision-engineered solutions for modern manufacturing industries.

Built on a foundation of technical expertise, quality focus, and customer-centric values, the company has evolved from its earlier identity as Spectra Diamond Tools into a Private Limited organisation, marking a significant milestone in its growth journey.

Our Mission

To manufacture high-performance diamond tools that consistently exceed industry standards for quality, precision, and durability.

To provide innovative, reliable, and cost-effective tooling solutions tailored to the evolving needs of modern manufacturing industries.

Industrial Ideas

Modern Equipment

Certified Engineers

Customer Approach

Material Selection

Process Efficiency

Cost Reductions

Quality Control

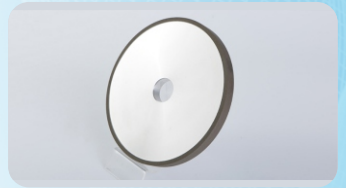

Our Vision

To become a globally trusted leader in precision diamond tooling solutions by driving innovation, delivering uncompromising quality, and empowering industries with advanced manufacturing technologies that enhance productivity and performance.

Resin Bond Diamond / CBN Wheels :

Resin Bond Diamond and CBN (Cubic Boron Nitride) Wheels are high-performance grinding tools designed for precision finishing, fine grinding, and polishing applications. These wheels use a resin-based bonding system to hold abrasive grains, offering excellent cutting efficiency, smooth surface finish, and controlled material removal.

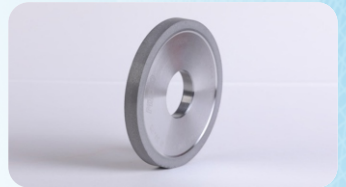

Metal Bond Diamond / CBN Wheels

Metal Bond Diamond and CBN Wheels are ultra-durable grinding tools engineered for high-precision, high-volume, and profile-critical applications. In these wheels, the abrasive grains are held together by a sintered metal matrix, providing exceptional wear resistance, shape retention, and long service life.

Electroplated Bond Diamond / CBN Wheels

Electroplated Bond Diamond and CBN Wheels are precision-engineered grinding tools where a single layer of abrasive grains is bonded to the wheel surface using a nickel electroplating process.

Diamond Dresser

Resin Bond Diamond and CBN (Cubic Boron Nitride) Wheels are high-performance grinding tools designed for precision finishing, fine grinding, and polishing applications. These wheels use a resin-based bonding system to hold abrasive grains, offering excellent cutting efficiency, smooth surface finish, and controlled material removal.

Vitrified Bond Diamond / CBN Wheels

Vitrified Bond Diamond and CBN Wheels are advanced grinding tools made using a ceramic (glass-like) bonding system, offering an ideal balance of high cutting efficiency, excellent form retention, and superior thermal stability. Their porous structure allows effective coolant flow and chip clearance, making them highly suitable for high-speed, precision grinding applications.
